Text-Image-GenAI — Ethics (1page summary)

Core Ethical Considerations

- Misinformation & deepfakes: generated images can be misused to deceive.
- Bias & fairness: training data biases can produce stereotyped or harmful outputs.
- Privacy: models trained on scraped data may inadvertently reproduce personal data.

Mitigations

- Content filters: block harmful prompts and outputs.
- Watermarking: embed detectable watermarks to signal synthetic origin.
- Human review & moderation for sensitive outputs.
- Dataset curation: apply provenance checks and bias audits.

Deployment Considerations

- Rate limiting and monitoring for misuse.
- Provide clear user guidance and disclaimers for generated content.
- Implement reporting and takedown processes.

Research Directions

- Robust watermarking and provenance verification.
- Better bias metrics and debiasing pipelines.

One-page ethics summary for exam prep and quick reference.
